

CLARITY

EVERY CALL, CHAT
AND CANCELLED ORDER
READ, SCORED AND ON
ONE SCREEN

Your customers already tell you what is wrong. Clarity reads all of it — English and Arabic — and turns it into a dashboard your team can act on.

WHAT IT IS

Three analysis engines feeding one customer-health view.

Call transcripts, support conversations and live orders are analysed continuously. Sentiment, intent, complaint driver and cancellation risk are attached to every record, then rolled up into trends, maps and alerts — always with a drill-down to the original conversation.

3 ANALYSIS ENGINES	4 LIVE DASHBOARDS
EN · AR BILINGUAL, RTL READY	100% RECORDS ANALYSED

WHY IT MATTERS

Read every conversation, not a sample of them.

Most QA teams score a handful of tickets a week and call it a trend. Clarity scores all of them, every day, and shows what actually moved.

- 01****Find it the same day.** A rising complaint driver appears as a trend line and an alert while it is still small — not in next month's report.
- 02****Fix the right thing.** Every number drills through to the merchant, zone, hour and the customer's own words behind it.
- 03****Agree on one score.** A composite health score built from sentiment, cancellations and escalations that agents, managers and execs all read the same way.

WHAT YOU GET ON THE WALL – AND WHERE EACH NUMBER COMES FROM

METRIC	READ FROM	ANSWERS
Customer health score	Sentiment + cancellations + escalations	Better or worse than last week?
Contact rate	Conversations against orders	How much volume needs help?
Negative sentiment share	Every classified conversation	How bad, trending which way?
Top negative triggers	Trigger tag per conversation	What exactly is going wrong?
SLA breaches	Open time against your threshold	Who is waiting too long right now?
Cancellation risk	Scoring on live orders	Which orders are about to be lost?

WHAT IT DOES

Three engines, each answering a question no team can answer by hand.

ENGINE 01 · CALL INTELLIGENCE

Every call transcript, read and tagged

AI-scored sentiment, intent, entities and a summary for each call. Searchable call log with the full transcript, intent breakdown, top complaint themes, and performance by delivery area and by merchant.

ENGINE 02 · SUPPORT CONVERSATIONS

Chats and tickets, classified and SLA-tracked

Sentiment, intent and the exact negative trigger on every conversation, enriched with merchant and zone. Sentiment trend, top triggers, channel comparison, geographic heatmap, live SLA-breach list, flag and resolve, CSV export.

ENGINE 03 · CANCELLATION RISK

Orders scored before you lose them

A risk score per live order with the driver named — merchant, zone, hour, day, basket size or who cancelled. Plus a written drivers report and an AI chat that answers questions against the underlying data.

IN THE PRODUCT

Built to be lived in, not exported from.

EXECUTIVE VIEW

CX dashboard

Total interactions, contact rate, sentiment score, cancellation and escalation rate, a composite health score and auto-written insight lines.

SEGMENTATION

Vertical & column filters

Split any view by business vertical, then filter columns spreadsheet-style down to a single merchant, zone or agent.

BILINGUAL

English and Arabic

Full interface translation with right-to-left layout, and analysis that reads Arabic conversations natively — no translation step.

EVERYWHERE

One time filter

Week, month, quarter or year to date, or a custom range — applied across every chart, table and record in the app at once.

ATTENTION

Thresholds & alerts

Set your own SLA and sentiment-spike thresholds; the app raises role-aware notifications the moment a line is crossed.

ASK ANYTHING

Chat with your data

Ask why cancellations rose in a zone last week and get an answer grounded in your own records, with the figures it used.

See it on your own conversations.

Bring a week you cannot explain — a sentiment dip, a cancellation spike, a queue that blew its SLA. We will load it and answer it live.
